X120^{GO} TECHNICAL FEATURES

The X120^{GO} is the latest generation system based on the SLAM technology, capable of covering any customer need. The range of up to 120 metres and a rotating head that maximises the coverage of the laser beam make it versatile for any environment. Equipped with 2 cameras and GNSS receiver for real-time point cloud colouring and orientation. The two cameras provide navigable and measurable panoramic cameras superimposed on the 3D model. The system allows for the survey of static scans in X-Whizz mode, automatically aligned to the SLAM survey. Backpack, shoulders hook, car mount and UAV mount for DJI M350 can complete the system.
